Hq crafting guide ffxiv

For comparison: the probability of the event occurring 5 times out of 5 trials will be 0.59 (59%) if $p=0.9$, and 0.328 if $p=0.8$, and only 0.168 if $p=0.7$. //ALL FIRST: correct this example, i.e. a calculation of the probability of actions. Unstable. High-quality articles have markedly better characteristics in the same level requirements, often better than articles a few levels above their own. But on the other hand, it can make you run all over Eorzea in one day to collect all the necessary materials and have time to elaborate all the required articles. Use the 3 hand-held bot for synthesis and increase of quality actions: under such conditions, the 10% failure rate of Basic Touch becomes acritical, but cannot be replaced with a careful synthesis without significant efficiency loss. But on the other side, progress, made by any class of the same level (with equivalent equipment) for any element of the same level will be the same. When you reach level 50, replace the entire Synthesis with it immediately. 250% efficiency of this action' can not save up to 2 steps. 50/50 may or may not fail. Except for the default 3 condition, there are two useful, "good" and "excellent" and the harmful: "poor." If you need or can do something other than increase the quality in this step, it's good. These missions can be taken from Levetemes in the regions of Eorzea where the corresponding guild halls are located. Each stack increases quality gain by ~11% [ALL: check dependency of the car level]. Hasty Touch quality improvement actions by Culinarian $\hat{A} \hat{e} \hat{e}$ a very low success rate, but they do not cost CP. Are you ready for this? The progress of the elaboration 3 not quite simple. Keep your Earth's DiskApulo (harveccia 3 n) classes slightly higher than your Hand (Manufacturing), and manufacturing classes slightly higher than the classes of disciple of the war and disciple of magic (battle). But after arriving at this point, probability begins to grow grow arap n $\hat{A}m$ oc se omoC. hcuoT ytsaH noc etreus raborp arap artxe osap renetbo y toN etsaW rasu arap o ,sisetn \hat{A} al arap PC ed ogla raruatser arap notanimuR odnaznal yotse ,nif roP ,senoicidnoc "erboP" > "etelecece" ed rap le y "oneub" le eugis erpems y ,laicini n $\hat{A}c$ idnoc al se "lamroN" . This method provides maximum average efficiency and is the best option if you need to create many HQ elements (normally, manufacturing materials). Difficultly you will get an advantage of elaboration if you can not create HQ articles for your level. Careful synthesis III of Weaver $\hat{A} \hat{e} \hat{e}$ 150% efficiency, available from level 62. "Excellent" multiplies quality gain by 27, But rarely appears (chance ~ 10%) and followed with the "poor". The Standard Touch in this case conditions both medium and maximum efficiency of efficiency due to much more PC cost and lower advantage in efficiency. Note: Make the test elements, to see how much progress you make, because you can sometimes underestimate your ability and unexpectedly complete synthesis by a single quick synthesis, before you will have begun to increase the quality. The manufacture of materials The materials are generally has quite low difficulty, which is served to synthesize them by one step. But the probability of this seems too small (16.6% *). Without a collection ability, an elaboration will be more expensive than buying a finished product. Elaboration of a complex article in each group of recipes There are several articles, which differs from another by ~ 20% -Mayor difficulty. So, how are all these media numbers in practice? This is not a way to get something easily. In addition, low durability applies strict restrictions on increasing quality. On average, approximately half of high quality ingredients will allow you to reliably produce HQ articles from approximately half of your current recipe list. After this mandatory part you can equip your tool and start creating. This diagram is based on the measures carried out while making 25LV. Buffs and additional firm hand (level 9): one of the most useful buffs, common for all kinds of crafting. However, a great deal of experience lends all efforts. Condition of materials very very The feature in the elaboration process is the condition of the materials - they appear random buffs, affecting quality points gain while using tactile actions. All the specific information of the class will appear on the corresponding pages. It's like a Limit Break if you catch it at a good moment and successfully use a touch. The only problem is the 50% success rate (70% with the Stable Hand) and because of this, the Rapid Synthesis must be used at the beginning of the elaboration in order to be able to use the "Plan Z." High quality items cannot be bought from a seller, and they are much, much, more expensive through the Market. Items, which requires 1296 quality points, and was tested by measurements on several lower level recipes. This method is one of the most used. Anyway, try not to leave this action for the last step if you have another option. Increase the quality first and then use Rumination to restore some CP and finish the synthesis. If successful from the first try, it will bring 250% of the progress against Basic Touch. For example: Start with Inner Quiet and Steady Hand, then use Hasty Touch to save CP, to get the maximum number of Standard Touches. Stable Hand Active or better Stable Hand II is highly recommended. Melt the stable hand and use quick synthesis (your success rate will be 70%). Low-level ingredients in high-level recipes do not give a significant amount of quality. But always prefer to ignore the material condition when you need to (re) launch Steady Hand, because if the touch fails, you will lose both the material condition bonus, as well as the quality increase in this step, and the actual step itself. In the beginning, it is necessary to drive the progress of synthesis, and the cross-class action Fast Synthesis is the best for this. If so, welcome to our ranks. Which profession to choose All kinds of crafts have certain With the others, so unlocking the greatest possible number, as soon as possible, it is a wise idea. Also sometimes as a couple with trade tricks that can restore sufficient cp to Waste Not. Also the NPC vendors offer only a small assortment of low-level materials, which can cover material needs only up to 10th to 15th level. When you make an item which you hadn't made before, you will get an additional experience bonus. At first, it increases success rate of almost all main actions to 100% It allow to charge Inner Quiet many times using the Hasty Touch (70% success rate isn't quite enough, but however it is better than basic 50%). Here are the common words about crafting, suitable for all crafting classes. So it isn't a right choice when you have small amount of CP, but it will be useful when limit of Durability is more tight, than limit of CP. This is too complex task to make a single universal formula for it, but on following simple example I'll try to illustrate main principles of solving it: For example, we need to make some material with minimal difficulty (we can synthesize it by 1 step) and we have 192CP for improving of its quality. Your culinarian skills must be at least 15th level. But if touch fails then consequences become more hard than usual. At last, the most interesting method: buffing Basic Touch with Steady Hand, which increases probability of first one up to 0.9 (90%). This page is ongoing, and I'll continue writing and improving it. As the most actions has success rate below 100%, Steady Hand is the basis of all crafting strategy. Class-specific guides //TODO: describe usage of specific abilities for each class Alchemist Guide Armorer Guide Blacksmith Guide Carpenter Guide Culinarian Guide Goldsmith Guide Leatherworker Guide Weaver Guide Its the best if you has already cast Steady Hand and Great Strides at this moment and ready to use you most powerful touch action. Unless you are generating base materials, avoid Quick Synthesis, as it grants a minimum amount of experience and the chance to create a HQ item is also minimal. In fact, all depends on certain situation. EW NHT.) Keep CP for basic touches, standard and others. Weaver careful synthesis II: 120% efficiency. In particular, the carpentry, the Herreria, the armor and the leather work have a lot of crossed requirements between Sa. But do not forget that the purposes of internal silence in these actions and the actions of synthesis of the plan, respectively. HQ probability If the progress of the elaboration has an absolutely linear scale, the possibility of creating an HQ element has a more complex dependence from the number of quality points. From ~ 21³ level, when the great progress becomes unlocked, the most effective strategy, which probably is "Forsage": get the highest possible quality of the first three steps and synthesize at the Last. And unlike common missions, you can provide high quality articles along with normal quality for the same order. From 7 to the 20th level of internal use, tranquility and restoration, durability with teachers is fixed to obtain more steps. Study the forms of all professions (go to Rin do not Sho, Miyamoto Musashi). We are going to compose a combination different from the available processing actions, which we can take with the given amount of CP. While it is level, maintaining weapons and gears close to the level of your character without the creation will require a lot of GL (often in the market). High quality materials can not be purchased from NPC providers, and like high quality articles, trusting the market for them is very, expensive. The reward will be increased proportionally to percentage of HQ elements. If you simplify this formula for m = N, then PM, M = P ^ M, as in the leveques, the HQ articles rewarded 8 e
